## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 18-20, 22-47 and 61-78 are allowable.
2. The following is a statement of reasons for the indication of

allowable subject matter:

Claims 18-20 and 22-26 are allowable because the prior art, particularly Allen et al. [U.S. Patent No. 4,570,217] (hereafter Allen) and Ehlers et al. [U.S. Patent No. 5,684,710] (hereafter Ehlers), Yabutani et al. [U.S. Patent No. 46,775,595] (hereafter Yabutani), Nuttall et al. [U.S. Patent No. 5,604,892] (hereafter Nuttall), Fung [U.S. Patent No. 6,859,882] and Forth et al. [U.S. Patent No. 6,853,978] (hereafter Forth) fail to teach or suggest a method of providing enterprise energy data over a network, the method comprising:

plotting a tariff line data value on the polar coordinated plot as a function of the tariff structure;

generating a cost line data value on the polar coordinated plot as a function of the amount of power consumed;

generating a normalized power operations line data value on the polar coordinated plot; nor

wherein the polar coordinated plot includes a horizontal axis and a vertical axis, wherein the horizontal axis and the vertical axis represent the predetermined period of time.

Claims 27-47 are allowable because the prior art, particularly Allen, Ehlers, Yabutani, Nuttall, Fung and Forth also fail to teach or suggest a computer program product for use in an enterprise energy management system, comprising:

computer readable program code for plotting the power line data value (or a plurality of power line data values) on the polar coordinated plot over the predetermined period of time; nor

computer readable program code for generating a vector on the polar coordinated plot stemming from a point of origin of the polar coordinated plot to the at least one power line data value.

Claims 61-78 are allowable because the prior art, particularly Allen, Ehlers, Yabutani, Nuttall, Fung and Forth also fail to teach or suggest a method (or a computer program product or a system) of providing event aggregation in an enterprise energy management system, the method comprising:

posting energy data events in the content summary viewing area as a function of the selection of a respective feed in the feed summary selection area.
